

Respray your PVC Door to any colour

Happy homeowners are reaping rewards by choosing uPVC window frame respray, rather than total window replacement.

Have you been stressing about the prospect of having your old window frames ripped out and new ones installed? It is quicker and more cost-effective to hire a professional paint spraying company for your uPVC window frame respray. Getting your existing PVC window frames painted provides an opportunity to recolour them. By invigorating dullish white window frames with a pop of colour, the exterior of your home takes on a fresh, bright appearance

SAVE OVER 60%

Yes It's true. You can save over 50% by resurfacing your existing PVCu window frames or doors rather than replacing them. There is also a significant saving in knock on expenses like repainting new plaster and making good window cills etc.

GUARANTEED

Our service is guaranteed to last. We are Ireland's approved applicators for PVC respray. The products do not just sit on the surface ..No.. They actually chemically bond to the surface. While its not scratch proof, with care it should last as long as a new finish.

ANY COLOUR

We can respray your front door and windows inside and out to any colour you choose. After time sometimes white PVC windows can look a little tired. Now with uPVC respray you can either completely change the colour to a fashionable cream or grey or redo them in factory white.

Choosing your colours is the fun part, but the colour coating process itself is interesting. A very specialised paint, which physically adheres to uPVC is mixed, using state-of-the-art computer-driven equipment. It creates another layer of coating that you will never need to repaint. Incidentally, uPVC paint dries within hours.
